

# Colocation

Discover EasyStreet's secure, dependable colocation and Internet connection services

*Located in Beaverton, Oregon, the EasyStreet® Online Services, Inc. colocation center has passed a SAS 70 Type II audit and is designed specifically for customers requiring security, reliability and performance. Our data center is supported by some of the most talented system administrators and engineers available, keeping watch 24/7 in EasyStreet's on-site Network Operations Center.*

## A SECURE FOUNDATION FOR OUTSTANDING SERVICE

EasyStreet's SAS 70 Type II-audited colocation facility gives the high reliability and manageability you need to protect your company's valuable hardware and software investment. Cage and cabinet space in our facility is protected with physical security, fire detection/suppression and redundant HVAC systems. Local electrical service is backed up by dual Uninterruptible Power Supplies and two diesel generators.

## FULLY REDUNDANT NETWORK REDUCES SINGLE POINTS OF FAILURE

EasyStreet colocation services include a fully managed, redundant network infrastructure. Our managed network provides connectivity through multiple

entrances to the Internet backbone via separate, fiber-based, fault-tolerant networks. Routers between your colocation cabinet and the Internet are redundant, minimizing potential single points of failure. EasyStreet also offers optical Ethernet from multiple providers scalable to 1 Gbps, giving you more options to manage connectivity to your systems.

## SAFE YET ACCESSIBLE

EasyStreet's secure colocation center is built for housing your critical hardware. Access to our colocation facility is available 24/7 to your authorized personnel. Electronic card locks and Bioscrypt™ fingerprint verification secure this facility from unauthorized access. A key lock provides secure access to your cage or cabinet space.

Our entire data center is monitored for intrusion detection with internal alarming and external security service with escalation procedures. Multiple surveillance cameras monitor all activity.

## RELIABLE—AND RENEWABLE—POWER OPTIONS

Dedicated 3600 Amp PGE service is backed up by dual 300kVA CleanSource® UPS systems with efficient flywheel energy storage and dual battery-powered 600kVA UPS systems. These UPSs are backed up by two diesel generators. Independent 20A feeds are provided to each cabinet. Full and half-sized cabinets have dual power feeds. One-third and smaller cabinets have a single power feed.

## FEATURES INCLUDE:

- SAS 70 Type II audit
- Fixed or burstable bandwidth models available
- Two data connections; one for Internet and one for other access needs.
- Single IP for single host installations. Multi-host installations issued addresses for routers and routable hosts in subnet blocks
